Project Planning Phase

Project Planning

Date	28-09-2026
Team ID	SWTID-2026-8399
Project Title	**Implement Client Script & UI Policy (Incident)**

1. Project Understanding

- Identify the problem of incomplete or inconsistent Incident data.
- Define the objective of improving data integrity through client-side controls.
- Identify the Incident fields that require conditional behavior: **Impact, Urgency, Assignment Group, Assigned To, and State**.

2. UI Policy Planning

- Create the **High Impact Control** UI Policy.
- Apply it to the **Incident** table.
- Set the condition **Impact = High**.
- MaKe **Assignment Group mandatory**.
- Enable **Reverse if false** so the behavior is reversed when the condition is no longer true.

3. Urgency Automation Planning

- Create a UI Policy Action for the **Urgency** field.
- MaKe Urgency **read-only** when Impact is High.
- Create an **onChange Client Script** on Impact.
- Automatically set Urgency to High when Impact becomes High.

4. Save Validation Planning

- Create an **onSubmit Client Script**
- CheckK whether Impact is High.
- CheckK whether **Assigned To** is empty.
- Prevent the Incident from being saved when Assigned To is missing.

- *Display an appropriate error message to the user.*

5. List Edit Control Planning

- *Create an **onCellEdit Client Script** for the State field.*
- *Prevent users from changing State directly from the Incident list.*
- *Allow State changes through the Incident form.*

1. Testing Plan

The project should include these tests:

Test	Expected Result
Impact = High	UI Policy is triggered
High Impact + empty Assigned To	Incident cannot be saved
High Impact + Assigned To filled	Incident saves successfully
Impact changed from High to Medium	Mandatory/read-only behavior is reversed
Urgency automation	Urgency is automatically set to High
State edited from list	Change is blocked
State edited from form	Change is allowed

Project Planning Flow

Requirement Analysis
↓
Configure High Impact UI Policy
↓
Configure Urgency UI Policy Action
↓
Develop onChange Client Script
↓
Develop onSubmit Validation Script
↓
Develop onCellEdit State Restriction
↓
Test Incident Form Behavior
↓
Test Incident List Behavior
↓
Validate Reverse Conditions
↓
Final Verification & Completion
