Requirement Analysis Phase 2

Technical stack

Technical Stack

- Platform: ServiceNow
- **Application/Module:** Incident Management
- **UI Technology:** UI Policies and UI Policy Actions
- **Scripting Technology:** ServiceNow Client Scripts using JavaScript
- **Client Script Types:** onChange, onSubmit, and onCellEdit
- **ServiceNow API:** `g_form` API
- **Main Fields:** Impact, Urgency, Assignment Group, Assigned To, and State
- **Testing Environment:** Incident Form and Incident List View
- **Validation:** Form validation and conditional field behavior

Tools Used

- **ServiceNow Instance** – Main platform used to configure and test the Incident project.
- **Incident Management** – Used to create and manage Incident records.
- **UI Policies** – Used to apply conditional behavior to Incident fields.
- **UI Policy Actions** – Used to make fields mandatory or read-only based on conditions.
- **Client Scripts** – Used to implement client-side automation and validation.
- **onChange Client Script** – Automatically updates Urgency when Impact changes.
- **onSubmit Client Script** – Validates the Incident before saving.
- **onCellEdit Client Script** – Prevents State changes through list editing.
- **JavaScript** – Used to write the Client Script logic.
- **`g_form` API** – Used to read and modify fields on the Incident form.
- **Incident Form** – Used to test UI Policies and Client Scripts.
- **Incident List View** – Used to test the State list-edit restriction.
